Git Workflow and Code Review (updated)

Branches are named feature/<ticket>, fix/<ticket> or hotfix/<ticket>. The main branch is protected: direct pushes are not allowed.

Every pull request needs at least 2 approvals, 3 for repositories that deploy to production, and a passing CI pipeline before it can be merged. Pull requests are merged with squash. Reviewers should respond within 1 business day.

Releases and hotfixes

Regular releases are made every second Tuesday. A hotfix must be reviewed and deployed within 24 hours of the incident declaration. Every release is tagged with a semantic version number, for example v2.4.1, and the changelog is updated before the tag is created.
